

Browser → server:

HTTP POST https://fullstack-exampleapp.herokuapp.com/new_note_spa

Status Code: 201 Created

Content-type: application/json

The POST request to the address "*new_note_spa*" contains the new note as JSON-data containing both the content of the note (*content*) and the timestamp (*date*), for instance:

```
{content: "Full Stack", date: "2020-07-23T18:33:57.285Z"}
```

The server responds with status code 201 Created. This time the server does not ask for a redirect, the browser stays on the same page, and it sends no further HTTP requests.

The SPA version of the app does not send the form data in the traditional way, but instead uses the JavaScript code it fetched from the server.
